

## ABSTRACT OF THE DISCLOSURE

A pivot-and-positioning assembly for an electronic device includes a mounting seat, a rotatable member mounted rotatably on the mounting seat, a first engaging member mounted  
5 on the rotatable member and rotatable along a circumferential trajectory, and a pair of diametrically disposed second engaging members mounted on the mounting seat. Each  
10 second engaging member defines a retaining recess that opens at a tangential direction relative to the trajectory for receiving the first engaging member.
